You should not get any reading or buzz when the doorbell is not pressed, so when you press the doorbell you should hear a beep or buzz and the meter should read continuity. Since it costs the same to install a bell that is compatible with a smart bell as it does to get an incompatible bell, I highly recommend choosing a bell compatible with smart bell from our list of bell compatible with smart bell. The main difference is that the most expensive multimeter is auto-range making it easier to use and has some additional features. disconnect wires. When the 2-amp ring bell is connected to at least 10V transformer power, it will be experienced also performance and quality enhanced video from the ring bell 2 because it will have more power to transmit video signals.
